QUESTO MANUALE è stato preparato con il preciso intento di aiutare tutti coloro che, nella pratica, hanno necessità di conoscere di un transistor i terminali, l'impiego e l'equivalenza con altri, per consentire una vantaggiosa sostituzione.

Il numero di transistori esistenti in commercio è notevolmente elevato; tuttavia possiamo affermare (senza tema di smentita!) che in questo volume esistono « quasi tutti » i tipi di transistori fabbricati nel mondo intero, compresi ovviamente — e con particolare riguardo — quelli di tipo americano e giapponese. Consente poi di avere intenzionalmente precisato « quasi tutti i tipi di transistori », poiché, come è risaputo, ogni giorno escono dalle fabbriche nuovi esemplari, al punto da rendere, anche se perdonabilmente, lievemente incompleto pure un manuale con serie pretese... di completezza, come è questo.

Questo manuale sarà di valido aiuto per il radoriparatore, il dilettante ed il negoziante: tutti potranno finalmente conoscere quali transistori americani e giapponesi possono essere sostituiti con quelli di fabbricazione europea, tutti ne constateranno la insostituibile funzione.

COME SI USA IL MANUALE

L'impostazione del manuale è stata improntata ai più rigorosi criteri di razionalità al fine di rendere il più possibile agevole ed immediata la sua consultazione. In questo modo, ricercare un transistor in questo manuale viene resa cosa facilissima; basta sfogliare qualche pagina per rendersi conto che le sigle, con cui vengono contraddistinti i vari transistori, sono disposte seguendo un ordine *numerico-alfabetico*.

Ad esempio: 2N34 - 2N35 - ... 2N1100 - 2N1101... - 2G107 - ... ecc. e per l'ordine alfabetico: AC105 - AC106 - ... - CPT1102 - CPT1103 - ... - OC44 - OC45 - ... ecc.

NELLA PRIMA COLONNA, viene riportata la sigla del transistor da ricercare.

NELLA SECONDA COLONNA, contraddistinta dalla parola « TIPO », il lettore troverà una lettera P oppure N. Nel primo caso il transistor indicato appartiene al gruppo P.N.P., nel secondo caso al gruppo N.P.N.

NELLA TERZA COLONNA, contraddistinta dalla parola « SOSTITUZIONE », vengono rese note le equivalenze, cioè vi si trovano segnati tutti i tipi di transistori che, avendo caratteristiche simili, si possono sostituire al transistor indicato nella prima colonna.

Ad esempio: se noi avessimo necessità di sostituire un transistor giapponese HJ230 (difficilmente rintracciabile sul mercato europeo), cercheremo nella colonna delle equivalenze quali tipi di transistori lo possono sostituire. Se fra i tanti che lo equivalgono noi disponessimo del tipo 2N219, potremmo tranquillamente sostituirlo a quello in oggetto, DOPO AVERE CONTROLLATO CHE SIA DI UGUALE POLARITA'. Questo controllo si rende necessario perché, sebbene abbiamo cercato di evitare di inserire nelle equivalenze transistori di polarità opposte, cioè dei P con degli N, e viceversa, in qualche caso siamo stati costretti a farlo per inelimitabile necessità. E' per questo che noi consigliamo di controllare che la polarità del transistor sostituito sia uguale a quella del transistor da sostituire.

NELLA QUARTA COLONNA, contraddistinta dalla parola « FABRIC. » possiamo trovare, in corrispondenza delle sigle riportate, la CASA PRODUTTRICE del transistor in esame. E' questa un'informazione da non sottovalutare, in quanto molte Case dispongono nei capoluoghi di provincia di rappresentanti di zona, a cui l'interessato può rivolgersi per richiedere l'esemplare di cui ha bisogno e che non riesce a reperire per altra via.

NELLA QUINTA COLONNA, contraddistinta dalla parola « IMPIEGO », il lettore troverà dei numeri da 1 a 13. Ogni numero corrisponde, in un preciso codice riportato nella tabella che segue, al ruolo cui il transistor è stato destinato dalla Casa produttrice e questo permetterà di stabilire a quale uso possiamo adibirlo; ad esempio: per lavorare in bassa frequenza, alta frequenza o come calcolatore elettronico.

INTRODUCTION

française

Ce manuel a été préparé dans le but précis d'aider tous ceux qui, dans la pratique, ont besoin de connaître les fils d'un transistor, son fonctionnement, ses rapports avec les autres, pour permettre une substitution avantageuse.

Le nombre des transistors en circulation dans le commerce est considérable; nous pouvons affirmer toutefois (et sans craindre de démenti) qu'il existe dans ce livre « presque tous » les types de transistors fabriqués au monde y compris bien entendu et avec un soin tout particulier ceux de type américain et japonais. Permettez-nous d'avoir précisé « presque tous les types de transistor » car, comme il est bien connu, de nouveaux exemplaires sortent quotidiennement des usines, qui

vont jusqu'à rendre légèrement et excusablement incomplet un manuel qui a de sérieuses prétentions... d'achèvement comme celui-ci.

L'amateur et le marchand; tous pourront enfin savoir quels transistors américains et japonais peuvent être substitués aux transistors de fabrication européenne, tous constateront sa fonction irremplaçable.

EMPLOI DU MANUEL

L'étude du manuel a été soumise aux critères les plus rigoureux du sens rationnel pour rendre sa consultation la plus aisée et la plus immédiate possible. Ainsi, dans ce manuel, la recherche d'un transistor devient chose très simple; il suffit de feuilletter quelques pages pour s'apercevoir que les sigles qui distinguent les différents transistors sont disposés selon un ordre *numérique-alphabétique*.

Par exemple: 2N34-2N35 - ...2N1100 -2G107... etc., et pour l'ordre alphabétique: AC105 - AC106 - ... CPT1102-CPT1103 - ...OC44... ect.

DANS LA PREMIERE COLONNE, sont reportés, les sigles du transistor que l'on recherche.

DANS LA DEUXIEME COLONNE, signalée par le mot « TIPO », le lecteur trouvera la lettre P ou bien N. Dans le premier cas, le transistor indiqué appartient au groupe P.N.P., dans le deuxième cas au groupe N.P.N.

DANS LA TROISIEME COLONNE, signalée par le mot « SOSTITUZIONE », sont indiqués les rapports, c'est à dire qu'on y trouve tous les types de transistors qui ayant des caractéristiques similaires, peuvent être substitués au transistor indiqué dans la première colonne. Par exemple: si nous devons substituer un transistor japonais HJ230 (difficilement trouvable sur le marché européen) nous chercherions dans la colonne des rapports quels types de transistors peuvent remplacer.

Si parmi tous ceux qui le valent nous disposions du type 2N219 nous pourrions tranquillement le substituer à celui en question, après s'être assuré qu'il a la même polarité. Ce contrôle se rend nécessaire car, bien que nous ayons cherché à éviter d'introduire des transistors de polarités contraires dans les rapports, c'est à dire des P avec des N et vice versa, nous avons été obligé de la faire dans certaines cas de nécessité absolue. Et c'est pour cela que nous conseillons de s'assurer que la polarité du transistor substitué est égale à celle du transistor à substituer.

Dans la quatrième colonne, signalée par le mot « FABRIC », nous pouvons trouver, correspondant aux sigles reportés, la maison de production du transistor sous étude. Il ne faut pas sous estimer ce renseignement de fait que de nombreuses maisons disposent de représentants de zones dans les chefs-lieux de province, auxquels l'intéressé peut s'adresser pour réclamer l'exemplaire dont il a besoin et qu'il ne peut obtenir d'une autre façon.

DANS LA CINQUIEME COLONNE, signalée par le mot « IMPIEGO » le lecteur trouvera des numéros de 1 à 13. Chaque numéro correspond, dans un index précis reporté à la page suivante, à l'emploi auquel a été destiné le transistor de la maison de production, et cela permettra d'établir à quel usage nous pouvons le destiner; par exemple: pour fonctionner à basse fréquence à haute fréquence ou comme calculateur électronique.

El presente manual ha sido preparado especialmente con el fin de ayudar a los que, en la práctica, tienen necesidad de conocer, en un transistor, los terminales, el empleo y la equivalencia con otros tipos, para permitir un reemplazo ventajoso.

La cantidad de transistores existentes en comercio es bastante elevada; sin embargo podemos asegurar (sin temor de desmentida!) que en este volumen figuran "casi todos" los tipos de transistores fabricados en el mundo entero, comprendido naturalmente — y en manera especial — los del tipo americano y japonés.

Ustedes nos permitirán de haber indicado intencionalmente "casi todos los tipos de transistores" pues, como es sabido, cada día salen de las fábricas nuevos ejemplares, lo que rinde, aún justificándolo, un poco incompleto también este manual, que todavía juzgamos se pueda considerar casi completo.

Este manual será de valiosa ayuda para el radioreparador, el aficionado y el comerciante; todos podrán por fin conocer los tipos de transistores americanos y japoneses que pueden ser reemplazados con los de fabricación europea, y todos podrán apreciar su función insustituible.

USO DEL MANUAL

El manual ha sido planteado según los criterios más rigurosos de racionalidad, con el fin de facilitar lo más posible su consultación. En esta forma, es extremadamente fácil buscar un transistor en el manual mismo: es suficiente hojear algunas páginas para darse cuenta que las siglas, con las cuales vienen señalados los diferentes transistores, están dispuestas siguiendo un orden *numérico-alfabético*.

Por ejemplo: 2N34-2N35 - ... 2N1100- 2N1101- 2G107 ... etc., y para el orden alfabético: AC105-AC106 - CPT1102 - CPT1103 - ... 0044-0045, ...etc.

EN LA PRIMERA COLUMNA, está llevada la sigla del transistor a buscar.

EN LA SEGUNDA COLUMNA, indicada con la palabra « TIPO », el lector encontrará una letra P o bien N. En el primer caso el transistor indicado pertenece al grupo P.N.P., en el segundo caso al grupo N.P.N.

EN LA TERCERA COLUMNA, indicada con la palabra « SOSTITUZIONE », se especifican las equivalencias, es decir están indicados todos los tipos de transistores que, teniendo características similares, pueden substituirse al transistor indicado en la primera columna.

Por ejemplo: en el caso de tener que reemplazar un transistor japonés HJ230 (el cual no se encuentra muy fácilmente en el mercado europeo) habrá que buscar en la columna de las equivalencias los tipos de transistores que pueden reemplazarlo.

Si, entre los varios que lo equivalen, nosotros pudiésemos disponer del tipo

2N219, podríamos tranquilamente reemplazarlo con el que nos interesa, DESPUÉS DE HABER CONTROLADO QUE TENGA IGUAL POLARIDAD. Este control se precisa pues, aún habiendo tratado de no insertar en las equivalencias, transistores de polaridades opuestas, es decir los P con los N y viceversa, a veces hemos tenido que hacerlo, en caso de necesidad absoluta. Es por esto que nosotros aconsejamos de controlar que la polaridad del transistor en reemplazo, sea igual a la del transistor a reemplazar.

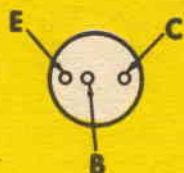

EN LA CUARTA COLUMNA, indicada con la palabra « FABRIC. », podemos encontrar, frente a las siglas indicadas, la Firma constructora del transistor en cuestión. No hay que descuidar este informe, por cuanto muchas Firmas tienen, en los Distritos de provincia, representantes de zona, a los cuales el interesado puede dirigirse para pedir el ejemplar que necesita y que no llega a encontrar por otros conductos.

EN LA QUINTA COLUMNA, indicada con la palabra « IMPIEGO » el lector encontrará los números desde 1 a 13. Cada número corresponde, en un código especial reportado en la tabla siguiente, al empleo por el cual el transistor ha sido destinado por la Firma constructora, lo que permitirá de establecer el uso al cual podremos destinarlo; por ejemplo: para trabajar a baja frecuencia, alta frecuencia o bien como calculador electrónico.

... hai ragione questi volumi sono veramente completi e interessanti.

le pubblicazioni tecniche più ricercate

- **Il radioriparatore** - G. Montuschi L. 500
- **La radio a transistor si ripara così** - G. Montuschi . L. 600 (in preparazione)
- **Novità transistor** L. 400
- **40.000 transistor** (2^a edizione)
- **Radiotelefoni a trans., 1^o Vol.** - G. Montuschi, A. Prizzi L. 600
- **Radiotelefoni a transistor, 2^o Vol.** - G. Montuschi . L. 600 (in preparazione)
- **Radiopratica** L. 1.200
- **Divertiamoci costruendo circuiti con diodi al germanio** L. 500 (in preparazione)
- **Divertiamoci con la radio** L. 500

Per le ordinazioni inviateci vaglia o versate l'importo relativo sul c.c.p. 8/17960 intestato alla **INTERSTAMPA post box 327 - BOLOGNA.**

Per le prenotazioni, non inviateci denaro, scrivete in semplice cartolina i volumi che desiderate ricevere appena saranno terminati.

INDUSTRIA COSTRUZIONI ELETTROMECCANICHE

I.C.E. - VIA RUTILIA N. 19/18 - MILANO - TELEFONO 531.554/5/6

IL rivoluzionario **SUPERTESTER 680 C**

23'000 ohms x Volt in C.C. e 4'000 ohms x Volt in C.A.

La I.C.E. sempre all'avanguardia nella costruzione degli Analizzatori più completi e più perfetti, è orgogliosa di presentare ai tecnici di tutto il mondo il nuovissimo **SUPER-TESTER BREVETTATO Mod. 680 C** dalle innumerevoli prestazioni e **CON SPECIALI DISPOSITIVI E SPECIALI PROTEZIONI STATICHE CONTRO I SOVRACCARICHI** allo strumento ed al raddrizzatore!

Esso è stato giustamente definito dalla stampa internazionale un vero gioiello della tecnica più progredita, frutto di molti decenni d'esperienza in questo ramo, nonché di prove e studi eseguiti presso i ben attrezzati laboratori I.C.E. e delle più grandi industrie elettrotecniche e chimiche di tutto il mondo.

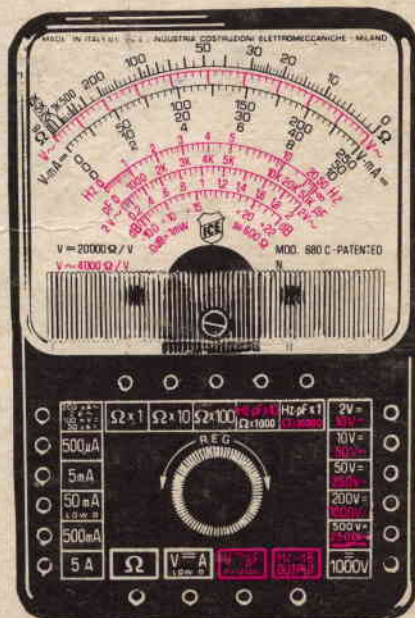

10 CAMPI DI MISURA E 45 PORTATE!!!

Il nuovo **SUPERTESTER I.C.E. Mod. 680 C** Vi sarà compagno nel lavoro per tutta la Vostra vita. Ogni strumento I.C.E. è garantito.

PREZZO SPECIALE propagandistico L. 10.500!!!

già netto di sconto, per radiotecnici, elettrotecnici e rivenditori

franco nostro stabilimento completo di puntali, pila e manuale d'istruzione. Per pagamenti all'ordine od alla consegna **OMAGGIO DEL RELATIVO ASTUCCIO antiurto.**

PROVATRANSISTOR e prova DIODI **TRANSTEST 662 I.C.E.**

Con questo nuovo apparecchio la I.C.E. ha voluto dare la possibilità agli innumerevoli tecnici che con loro grande soddisfazione possiedono o entreranno in possesso del **SUPERTESTER I.C.E. 680 C**, di allargare ancora notevolmente il suo grande campo di prove e misure già effettuabili. Il **TRANSTEST** unitamente al **SUPERTESTER 680 C**, può effettuare (contrariamente alla maggior parte dei prova transistor della concorrenza che dispongono di solo due portate relative alle misure del coefficiente di amplificazione) ben sette portate di valore assoluto e cioè **5-20-50-200-500-2000-5000**.

Il **TRANSTEST I.C.E. 662** permette inoltre di effettuare misure di I_{cbo} - I_{ebo} - I_{ceo} e ciò in contrapposizione ai molti prova transistor di altre case che normalmente permettono di misurare la sola I_{cbo} (comunemente chiamata con l'abbreviazione I_{co}) trascurando inspiegabilmente la I_{ebo} e la I_{ceo} che diverse volte presentano una notevole importanza per il tecnico esigente.

PREZZO NETTO: solo L. 6.900!!!

Franto n/s stabilimento - completo di puntali, di pila e di manuale d'istruzione. Per pagamenti all'ordine o contrassegno **OMAGGIO DELL'ASTUCCIO BICOLORE.**

Per strumenti da pannello, portatili e da laboratorio, richiedeteci cataloghi.
