1. Charging 充电

1.1 Charging current 充电电流

Charging current should be less than maximum charge current specified in the product specification.
Charging with higher current than recommended value may cause damage to battery electrical, mechanical,
and safety performance and could lead to heat generation or leakage.

充电电流不得超过本规格书中规定的最大充电电流。使用高于推荐值电流充电将可能引起电池的充放电性
能、机械性能和安全性能的问题，并可能会导致发热或泄漏。

1.2 Charging voltage 充电电压

Charging shall be done by voltage less than that specified in the product specification (4.20V/battery).
Charging beyond 4.23V, which is the absolute maximum voltage, must be strictly prohibited. The charger
shall be designed to comply with this condition.

充电电压不得超过本规格书刊号中规定的额定电压（4.20V/电池）。4.23V 为充电电压最高极限，充电器
的设计应满足此条件。

It is very dangerous that charging with higher voltage than maximum voltage may cause damage to the
battery electrical, mechanical safety performance and could lead to heat generation or leakage.

电池电压高于额定电压值时，将可能引起电池的充放电性能、机械性能和安全性能的问题，可能会导致发
热或泄漏。电池电压高于额定电压值时，将可能引起电池的充放电性能、机械性能和安全性能的问题，可能会
导致发热或泄漏。

1.3 Charging temperature 充电温度

The battery shall be charged within the range in the product specification.

电池必须在本规格书要求的环境温度范围内进行充电。

1.4 Prohibition of reverse charging 禁止反向充电

Reverse charging is prohibited. The battery shall be connected correctly. The polarity has to be confirmed before wiring. In case of the battery is connected improperly, the battery cannot be charged. Simultaneously, the reverse charging may cause damaging to the battery which may lead to degradation of battery performance and damage the battery safety, and could cause heat generation or leakage.

正确连接电池的正负极，严禁反向充电。若电池正负极接反，将无法对电池进行充电。同时，反向充电会降低电池的充放电性能、安全性，并会导致发热、泄漏。

2. Discharging 放电

2.1 Discharging current 放电电流

The battery shall be discharged at less than the maximum discharge current specified in the product specification. High discharging current may reduce the discharging capacity significantly or cause over-heat.

放电电流不得超过本规格书规定的最大放电电流，大电流放电会导致电池容量剧减并导致过热。

2.2 Discharging temperature 放电温度

The battery shall be discharged within the range specified in the product specification.

电池必须在本规格书要求的环境温度范围内进行放电。

2.3 Over-discharging 过放电

Over-discharging may causes loss of battery performance, characteristics, or battery functions

过放电会导致电池性能、电池功能的丧失。

The charger shall be equipped with a device to prevent further discharging exceeding a cut-off voltage specified in the product specification. Also the charger shall be equipped with a device to control the recharging procedures as follows: The battery pack shall start with a low current (0.01C) for 15 - 30 minutes, i.e. pre-charging, before rapid charging starts. The rapid charging shall be started after the (individual) battery voltage has been reached above 3.00V within 15 - 30 minutes that can be determined with the use of an appropriate timer for pre-charging. In case the (individual) battery voltage does not rise to 3.00V within the pre-charging time, then the charger shall have functions to stop further charging and display the battery/pack is at abnormal state.

充电器应有装置来防止电池放电至低于本规格书规定的截止电压。此外，充电器还应有装置以防止重复充电，步骤如下：电池在快速充电之前，应先以一小电流（0.01C）预充电 15~30 分钟，以使电池的电压达到 3.00V 以上，再进行快速充电。可用一记时器来实现该预充电步骤。如果在预充电规定时间内，电池的电压仍未升到 3.00V 以上，充电器应能够停止下一步快速充电，并显示该电池/电池正处于非正常状态。

3. Storage 贮存

If the battery has to be storied for a long time, the environmental condition should be:

Temperature:23±2°C, Humidity: 65±20%RH

长期存储电池须置于温度为 23±2°C、湿度为 65±20%RH 的环境中。

The voltage for a long time storage shall be 3.70V~3.95V range.

贮存电压为 3.70V~3.95V。

We recommend that batteries be charged about once per half a year to prevent over discharge.
